Brighton UK, mLife Events Announces the Winners of the mobileGov Awards 2017

Today, Global mobileGov Awards Winners have been announced at the closing ceremony of the mobileGov World Summit 2017- www.m4life.org. We, as mLife Conferences and Exhibitions, congratulate all nominations and winners for their unique contributions to the mobile public service innovation and for setting inspirational examples for other governments and businesses across the globe. These awards represent excellence in various international projects in designing the future of eGovernment.

Global mobileGov Awards is a worldwide contest aiming to promote advances in the field, and to create a platform to share knowledge on recent developments in mobile public services and public sector modernisation. The nominations for the Global mobileGov Awards have clearly shown us that the pace of the recent developments in mobile applications in the public sector has significantly improved over the last years and governments have increasingly been more involved in strategic implementations to open up new service channels to their citizens.

These recent developments have given pride and happiness to all of us, who have proactively supported innovation and excellence in public sector modernization. Today, therefore, is a great day to celebrate all these achievements and set new targets for our future.

For this year's Global mobileGov Awards, we have received more than hundred nominations internationally. After two rounds of evaluation, 15 best nominations have been short-listed. The final evaluation has proven to be the toughest among all, since finalist projects were all remarkable and top-notch. Therefore, besides top 3 best implementers of mobile technologies in governments, two additional categories of awards were also announced: "mobileGov Recognition" and "mobileGov Honorable Mention".

We believe that Global mobileGov Awards is not the platform for choosing the best projects but a platform to enhance cooperation and collaboration between all the key actors in mobile public services. We hope that all these highly successful projects will motivate other government organizations to follow suit and deploy even better solutions for citizens, businesses and government employees.

We are proud to list here award winners at the Global mobileGov Awards 2017:
